

M&G 2.5% Target Income Fund

Target Income

Q4 2024

Market overview

In the fourth quarter, global markets and sentiment were shaped by political shifts and central bank actions. November was dominated by the US election, starting with the lead up to the election date and results announcement to the subsequent nominations for key office position appointments. The Trump victory led to a further increase in the US dollar accompanied by a strong rally in US equity markets.

Central banks globally continued to adjust their policies well into the latter part of December. Several rate cuts were announced in December, including the US Federal Reserve (Fed), European Central Bank (ECB), Canada, Switzerland, Mexico, and Turkey. The Bank of England (BOE) and Bank of Japan (BOJ) held rates steady. The Fed's rate cut, accompanied by a hawkish tone, suggested that it could be the last cut for a while, and the market reacted by selling off as expected. Meanwhile, China's stimulus package announcement in September resulted in volatility in equity markets continuing into the quarter.

Global equities experienced a slight decline of 1% in the fourth quarter, but showed a strong annual gain of 17.5%, as measured by the All Country World Index (ACWI). Both developed and emerging market equities saw negative returns in the fourth quarter, with developed markets down by 0.2% and emerging markets down by 8.0%. In emerging markets, sentiment was dampened by President Trump's victory, which raised concerns over trade tariffs, especially with China. Brazilian equities struggled, with the Bovespa falling by 29.5%, while China underperformed by 4.9% due to tariff fears. Other markets such as India (-10.6%) and Turkey (-3.1%) also contributed to weaker performance. Despite this, for 2024, the MSCI Emerging Market Index added 7.5%, though it lagged behind the ACWI's 17.5% return, primarily due to the stellar performance in US markets. Global property also faced losses, down 9.2% for the quarter but ended the year in positive territory with 1.6%.

Global bonds were one of the weakest asset classes, with the Bloomberg Global Aggregate Index showing a 5.1% decline for the quarter and a 1.7% decline for the year. This was unexpected, considering the start of a rate-cutting cycle. However, market expectations for a shallow cutting cycle, coupled with concerns over persistent US inflation above the 2% target, dampened bond market performance. Volatility in the bond market was driven by rising inflation expectations and central bank actions, leading to selloffs in key government bond markets, particularly US Treasuries and UK Gilts.

Local equity and bond markets saw slight declines, with the biggest impact coming from the weakening of the rand. Despite a solid annual return of 13.4%, the FTSE JSE All Share Index fell 2.1% in the fourth quarter. On a sector level, industrials posted modest returns of 0.2%, while financials (-1.2%) and resources (-10.1%) dragged on performance for the quarter (all in rand).

South African listed property posted a 0.4% loss in the fourth quarter, but still delivered strong annual returns of nearly 30%.

The FTSE All Bond Index (ALBI) returned 0.4% for the quarter, while inflation-linked bonds (ILBs) returned 0.8%. Notably, South African bonds finished the year with a robust 17% gain, while ILBs returned 7.8% (both in rand). Throughout the year, the nominal bond market experienced significant volatility, with the 10-year bond yield peaking at 12.50% in April before strengthening to around 10.30% by year-end. The yield curve also bull-flattened in 2024, with long-term bond yields falling more sharply than shorter-term ones. The ILB curve flattened slightly, coming off an already flat basis at the start of the year. SA cash gained 2.0% for the quarter (in rand).

United States

Political developments played a significant role in shaping market sentiment during the fourth quarter. US equities rose in the quarter, driven by President Trump's election victory and Republican control of Congress, which fuelled optimism around expectations of tax cuts, deregulation, and pro-growth policies.

Meanwhile, US inflation rose to 2.7% y/y in November, slightly up from 2.6% y/y in October, in line with expectations. This didn't sway the Federal Reserve's decision to cut interest rates by 25 basis points in both November and December, bringing the target range to 4.25%-4.5%. US third quarter growth reached 3.1%, driven by strong consumer spending, and slightly better than the second quarter's 3.0% growth.

While US equities surged in November following the election results, the rally stalled in December after the Fed lowered its expectations for further rate cuts due to slower inflation progress and an uncertain policy outlook. Despite this, US equities still finished the quarter strong, with the Nasdaq leading at 6.3%, followed by the S&P 500 (2.4%) and the Dow Jones (0.9%).

Notably, US equities posted solid returns across all indices for the year led by the Nasdaq (29.6%), S&P 500 (25%), and the Dow Jones (15%), all in US dollar terms. Bonds, however, faced a more challenging quarter. Bond yields rose and the fed fund futures curve moving higher following the market expectations for fewer rate cuts in 2025 (due to persistent inflation) led to a sell-off in US Treasuries in December.

Eurozone

Eurozone faced another challenging quarter. Equities declined due to recession fears and political instability in France and Germany. Slightly improved third quarter growth of 0.4% q/q from 0.3% q/q in the second quarter was better than the 0.2% expected.

Inflation rose by 2.2% y/y in November, driven by higher commodity prices, from 2.0% in October and slightly below the

Fund facts

Fund objective

To target an annual income return of 2.5%, with a secondary objective of growing capital. While a 2.5% annual income return is targeted, the actual income return may vary.

Investor profile

Income drawing investors who want to invest in a fund that aims to earn 2.5% income per year. Subject to this level of income return being achieved, investors also want capital growth over time. Given the level of targeted income return, it's likely that the real value of capital after targeted income drawdowns will grow over the long term.

Investment mandate

The Fund invests in a flexible mix of local and foreign equity, bonds, property and cash. The Fund can also invest in derivatives and other collective investment schemes. The Fund is not managed to conform to the regulations governing retirement fund investments (Reg. 28). The Fund is not limited in terms of allocation to asset classes, currencies or geographies.

Income distribution

The income earned from the Fund's underlying assets will be distributed quarterly. Typically, investors will reinvest these distributions. Regular drawdowns, which could be made monthly, quarterly, half-yearly or yearly, will be funded through the sale of units.

3 years	9.4%	5.3%	9.8%
5 years	10.4%	4.9%	10.8%
Since inception	8.7%	4.7%	-

2.3% forecast. Despite the slight uptick in inflation, the European Central Bank (ECB) unanimously decided to reduce interest rates by another 25 basis points in December, lowering its deposit rate to 3%. The ECB also signalled further cuts for 2025.

United Kingdom

Inflation in the UK rose by 2.6% y/y in November, in line with forecasts but up from 2.3% in October. As a result, the Bank of England kept interest rates unchanged at 4.75% in December, as expected. Economic growth in the UK disappointed, with quarterly growth at 0% q/q, down from 0.5% in the previous quarter, and falling below the anticipated 0.2%, revised downward from initial estimates. In this environment, UK equities declined, affected by rising bond yields, inflation expectations, and concerns over government fiscal policies following the Autumn Budget. The FTSE 100 ended the quarter down 6.8% but posted a 7.7% gain for the year.

China

Deflationary pressure continues in China, with the CPI slowing to 0.2% y/y in November, down from 0.3% in October. The People's Bank of China (PBOC) kept its benchmark lending rates unchanged, maintaining the one-year loan prime rate at 3.1% and the five-year rate at 3.6%. China's third quarter GDP growth slowed to 4.6% from 4.7% in the second quarter, resulting in a 4.8% growth rate for the first three quarters of the year. In recent months, China has introduced several measures to stabilise its economy, including shifting to a looser monetary policy in December, providing tax incentives for the property market, and unveiling a 10 trillion yuan debt package. Markets were spurred early November following a stimulus package unveiled late in September to support the economy and ailing property market but retraced some of those gains by quarter end. The Hang Seng Index dropped 4.9% in the fourth quarter but posted a strong 23.7% gain for the year.

Japan

Japan's core consumer price inflation rose to 2.7% y/y in November, up from 2.3% in October, in line with expectations and remaining above the Bank of Japan's 2% target. The Bank of Japan kept its benchmark interest rate steady at 0.25% in December.

Japan's third quarter GDP was revised upward to a 1.2% annualised growth rate, compared to the initial estimate of 0.9%, though it was lower than the 2.2% annualised growth in the third quarter. The Nikkei Index fell 4.1% in the fourth quarter due to a weak yen and strong US economic performance but finished the year with an 8.8% gain (in US\$).

Commodities

Commodities also stayed true to form with volatile moves across the board and faced another challenging month of negative returns for the quarter. Notably, nickel, palladium and copper suffered losses of around 11%. After strong performance in recent months, gold retraced some of its gains this quarter with -1.3% due to US dollar strength but still ended the year with close to a 27% return. Brent crude gained 3.6% for the quarter.

South Africa

South Africa's consumer price index (CPI) rose by 2.9% y/y in November, up from 2.8% y/y in October. Despite this slight inflation increase, the South African Reserve Bank (SARB) Monetary Policy Committee reduced the policy rate by 25 basis points to 7.75% in November. The country's third quarter GDP contracted by 0.3%, primarily due to a decline in agricultural

output, following a revised 0.3% growth in the second quarter.

Performance

The M&G 2.5% Target Income Fund returned 2.7% (A class, net of fees) for the fourth quarter of 2024 and 12.5% for the 12-month period ending 31 December 2024.

In terms of asset allocation, the fund's position in international cash added the most value to absolute performance for the quarter, given the rand weakened against the US dollar, which was driven by a post-election rally and strong economic performance. The rand also weakened against the British pound, and euro. The fund's allocation to international equity also added significantly to performance.

The SA equity allocation detracted slightly from absolute performance amid a market that experienced slight declines.

The fund's position in ABSA added good value to the fund this quarter. ABSA has shown a steady improvement in operating performance and is generating a return on equity (ROE) of approximately 13%, which is substantially up from the high single-digit returns it was generating just a few years ago. We think that its ROE will continue to gradually improve and support its share price, which we think is still undervalued.

The fund's position in Pepkor also contributed positively to absolute performance over the quarter. It has been a strong beneficiary of the lower bond yields and improving consumer sentiment during the quarter.

Not holding Sasol proved beneficial for performance, as it was down -28.25% during the period.

Not holding Discovery, however, detracted from performance as it delivered well during the quarter.

Strategy and positioning

Most asset classes experienced volatile moves in the fourth quarter of 2024, and we exploited favourable entry points in the markets to add back to risk assets using the cash available from third quarter profit taking.

In broad terms, we have left our offshore versus local asset positioning mostly unchanged for the quarter and continue to prefer domestic assets over foreign exposure.

SA equities are coming off a very low base and continue to screen relatively cheap compared to other markets. We continue to hold an overweight position as market valuations point to a continued rerating in that asset class.

Fundamentally, SA equities still trade at low valuation levels when looking at both the 12-month forward P/E ratio (10.1x) as well as the Price-to-Book ratio (1.72x). Local equities have experienced a moderate decline since the US elections, but we witnessed strong positive returns in the asset class leading up to that point, predominantly after the local government elections, adding positively to portfolio returns during the year.

On the local property front, we've continued with our trajectory of closing the underweight we had in the portfolios to that asset class. As at the end of the fourth quarter, we still have a small underweight to the property sector in place in the portfolios, but at a much-reduced scale compared to the start of the year. This change is on the back of improved fundamentals seen in the

sector, especially the improvement in published financials reported by some companies as well as the reprieve experienced due to reduction in loadshedding and interest rates moving lower. For the year, property was the top-performing asset class in the local market but, with the move coming off a very low base, we've been comfortable making use of opportunities presented by market volatility to close the underweight we held in that asset class.

From a valuation perspective, our 10-year yield is still pricing a real return in excess of our fair value assumptions and, therefore, nominal bonds remain a key holding across the funds. This position led to favourable returns in the second half of 2024 given the post-election rally in local assets and we continue to keep the position in place due to improved fundamentals in our market.

The last quarter of 2024 was very muted in the local bond space – especially in comparison to the second and third quarter rallies we experienced. We made use of a selloff in bonds at the start of the quarter to add some more exposure to our portfolios to reinstate some of the positions we had taken off during the third quarter rally. Real yields are still trading at attractive levels compared to our equilibrium return assumptions and we continue to see merit to holding a sizeable overweight to nominal bonds in our portfolios. Given the strong returns witnessed in this asset class during the year, our portfolios have benefitted significantly from our overweight holding to SA nominal bonds throughout the year.

Our house-view portfolios continue to have no meaningful exposure to SA inflation-linked bonds (ILBs) as our preference has been for nominal bonds in favour of ILBs. Real yields for these instruments are attractive at current levels but, given liquidity constraints and the advantage of being in nominal bonds in a rate-cutting environment, we continue to favour nominal bonds over ILBs in most of our portfolios.

Our portfolios remain tilted away from SA cash as the interest rate-cutting environment will lead to lower positive real cash rates over the medium term. We continue to prefer the risk-adjusted returns we receive in the SA equity and bond space and would expect that gap to open even more as local interest rates are cut further beyond this point, even in a shallow rate-cutting cycle such as the one the market is currently pricing in.

In our global portion of the portfolios, we are currently slightly overweight global equities; overweight bonds and cash; and underweight credit and property. We continued to broaden out our carry basket during the quarter by adding long positions in Turkish lira and Colombian peso to existing Mexican peso and Brazilian real exposures, funded out of new shorts in Thai baht and Taiwanese dollar being added to US dollar and euro short positions.

The valuation for the MSCI All Country World Index 12-month forward P/E ratio peaked at the beginning of December before settling back at around 18x by the end of the year. The main driving force behind this valuation remains the high multiple that the US is trading on, with the S&P 12-month forward P/E remaining elevated at the current 22x. Due to this, we have kept our underweight position to the US market in place during the quarter as we continue to see better valuation opportunities in other equity markets.

We made use of market diversions post the US election to add back some of the tactical China exposure we took off at the end of September as well as reinstating a long position to the Indonesian equity market. Away from that, we continue to hold tactical long positions to Latam markets, South Korea and Japan.

We continue to favour long-dated US treasuries given the favourable real yields delivered by these instruments. In addition, we introduced a new tactical position to Brazilian bonds to the fund in December given the episodic selloff seen in bond yields in that region.

We maintain our underweight position to global corporate credit given that credit spreads have continued to contract during the quarter, increasing the unattractiveness of the risk-reward payoff for those instruments. □

Disclaimer

MandG Investments Unit Trusts (South Africa) (RF) Ltd (Registration number: 1999/0524/06) is an approved CISA management company (#29). Assets are managed by MandG Investment Managers (Pty) Ltd, which is an approved discretionary Financial Services Provider (#45199). The Trustee's/Custodian details are: Standard Bank of South Africa limited – Trustees Services & investor Services, 20th Floor, Main Tower, Standard Bank Centre, Heerengracht, Cape Town.

Collective Investment Schemes (unit trusts) are generally medium- to long-term investments. Past performance is not necessarily a guide to future investment performance. Unit trust prices are calculated on a net asset value basis. This means the price is the total net market value of all assets of the unit trust fund divided by the total number of units of the fund. Any market movements – for example in share prices, bond prices, money market prices or currency fluctuations – relevant to the underlying assets of the fund may cause the value of the underlying assets to go up or down. As a result, the price of your units may go up or down. Unit trusts are traded at the ruling forward price of the day, meaning that transactions are processed during the day before you or the Manager know what the price at the end of the day will be. The price and therefore the number of units involved in the transaction are only known on the following day. The unit trust fund may borrow up to 10% of the fund value, and it may also lend any scrip (proof of ownership of an investment instrument) that it holds to earn additional income. A M&G unit trust fund may consist of different fund classes that are subject to different fees and charges. Where applicable, the Manager will pay your financial adviser an agreed standard ongoing adviser fee, which is included in the overall costs of the fund. A unit trust summary with all fees and maximum initial and ongoing adviser fees is available on our website. One can also obtain additional information on M&G products on the M&G website. The Fund may hold foreign securities including foreign CIS funds. As a result, the fund may face material risks. The volatility of the fund may be higher and the liquidity of the underlying securities may be restricted due to relative market sizes and market conditions. The fund's ability to settle securities and to repatriate investment income, capital or the proceeds of sales of securities may be adversely affected for multiple reasons including market conditions, macro-economic and political circumstances. Further, the return on the security may be affected (positively or negatively) by the difference in tax regimes between the domestic and foreign tax jurisdictions. The availability of market information and information on any underlying sub-funds may be delayed. The Manager may, at its discretion, close your chosen unit trust fund to new investors and additional investments by existing investors to make sure that it is managed in accordance with its mandate. It may also stop your existing debit order investment. The Manager makes no guarantees as to the capital invested in the fund or the returns of the fund. Excessive withdrawals from the fund may place the fund under liquidity pressure and, in certain circumstances, a process of ring-fencing withdrawal instructions may be followed. Fund prices are published daily on the M&G website. These are also available upon request. The performance is calculated for the portfolio. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. Purchase and repurchase requests must be received by the Manager by 13h30 (11h30 for the Money Market Fund) SA time each business day. All online purchase and repurchase transactions must be received by the Manager by 10h30 (for all Funds) SA time each business day.
